NEW! SUSTAINABLE **NEW!**

DeCatalyst IONS - Community Group and RelaxSpa Newsletter

September 2000 Vol 1 #4

DeCatalyst

Stress Management and Health: The bigger picture. Stress Management and Health quite naturally lead to Life, Health, Prosperity and Sustainability. We are considering a Pathfinding and Exploratory Online Newsletter to review the Lifestyles we are creating as they pertain to, and influence the above positive Life Sustaining criteria. Perhaps there are elements that are missing, or could be enhanced that would add to our enjoyment of Life, Health and Prosperity, as well as creating an ongoing legacy to our children and future generations. **If there is interest, feedback, supporting article submissions, we may decide to publish quarterly.**

Editor's note: Lifestyles Unlimited newsmagazine enjoyed a brief foray as printed material in the early 90's. It is being revived Online because its roots coincide with the Pathfinding Project -exploring tangible evidence for a renewed Myth, Vision, that can Sustain Unlimited Lifestyles and fulfill THE ORIGINAL PROMISE that has always been: " **dominion, (caretaker) over all things, to have life and live it more abundantly**": -Lifestyles Unlimited *The Scientific Connection: Science, Philosophy, Religion, Metaphysics*

Editorial

Observing world events that consistently touch the sensitive nerve of our outdated energy base, I get the uncanny, yet secure feeling that Nature (Gaia hypothesis) somehow has an inbuilt tendency which implores us to expand our limits. Whether this survival slant is attained by "conscious choice" or by **default**, each with their unique consequences, appears not to deter in the least, the Gaia "system's" undeviating parameters propelling life forward toward evolutionary (sustainable and balanced) growth.

Lifestyles

Unlimited Sustainable? Why, pray tell, not?

The State of the World today certainly camouflages the existence of this expanding spiral of Life and Intelligence. However, we may well assume as established fact that in proportion as intelligence (including wisdom and understanding) advances, the individual ceases to be subject to a mere law of averages and has a continually increasing power of controlling the conditions of his own survival. The more we replace our mindless, unconscious choices, or lack of choices, with expanding conscious choices, the less likely are we to evidence the misery, suffering, limitations, and destruction around the globe. Conscious Choice, in this context, is characterized by a very distinct and special flavor. It asks us how far can we see, how far are we willing to see? It inquires of us an accounting of the dimensions and clarity of our window to reality. It is the gestalt factor which sanctions the evolutionary apex of intelligent life on this planet to rise by its own volition, replacing the default mode and its attendant drag on the time line. In fact, conscious choice and expanding viewing point are inseparable. Together they transform our choices into self-evident recognition.

Local/Global 'KISS' explanation: Beach and Grains of Sand - our actions occur at the local level, in the grains of sand; to SEE our objectives, where to go, we require an expanded Global viewpoint, the Beach Scene.

I recall an old parable about a stampeding herd of cattle heading toward a cliff. The cattle are blindfolded. It would be extremely difficult to stop them from running right off the cliff. However, if their blindfolds were removed, they would turn on their own accord. **What are our blindfolds?**

- | |
|--|
| 1. aside from breaching the paramount magnitude of balanced contemporary education attainability & availability to all |
| 2. besides laxity in promoting awareness of adaptive behavior criteria, as revealed by our psychological disciplines |
| 3. aside from the low priority yielded to the social importance of self-esteem as published in the final report of John Vasconcellos's California Task Force Commission |
| 4. aside from remiss, disdain, and scorn toward the roles power, politics, accountability and freedom play in our continued health and survival |
| 5. aside from ignorance of sustainable survival patterns found in the fragile balance between self interest and community interest, "institutionalized" behavior and "empowerment" of the individual - as disclosed by organization dynamics and organization psychology |
| 6. aside from remiss, disdain, and scorn toward the fragile balance between humanity and the environment, humanity and earth ...our home |

What signature does this behavior output broadcast.... when you see the beer cans, diapers, and trash in our parks, beaches, streets and yards? Kids ambushing kids? Employees shooting employers? Road Rage? Elder and child abuse? Moral bankruptcy? A language whose Words are no longer to be trusted - in public, business, government and courts of law? Where multinational executives proclaim, 'it is no longer the power of love, but the Love Of Power? Are our experts going to label it Natural, Normal DNA/Gene based, Coming out of the Closet behavior. Normal because the behavior is approaching the norm, supported by a biological tendency - and never once looking at, or revealing the causes of behavioral & biological tendencies? It is no small wonder politics, science and religion do not mix.

Imagine if Sunday School were thus:*In the beginning, God created Adam and Steve, and said, "Go forth and multiply"; and He saw that it was good. After God's work was reviewed by peers, it was accepted and published in the New England Journal of Medicine. The Infamous Milgram experiment proved itself once again. The masses accepted the belief without question..... Now, back to the ballgame, football scores and shopping till dropping.*

Is it still a wonder that we are faced with fundamental dilemmas that threaten our

survival?....behavior that now spreads its influence to continued use of an outdated, 'dinosaur' energy base, creating 24hr round the clock, rush hour traffic nightmares, air, water, noise and topsoil pollution, disease, ecological imbalanceto economic interest no longer in human interest....with all accompanying consequences.

.....visit: [DeCatalyst Global Outlook Page](#)

We have all experienced to some degree the self-imposed and suffocating limits, which outdated institutions not geared to change with the times, levy upon our beliefs, thoughts and behavior. We can also study history and comparative psychological data, to determine the cyclical nature of civilizations, cause/effect relationships, and perhaps determine if there are interventions that could create more positive outcomes. I believe that it is clear to many of us by now, that the terms "think globally, act locally", "points of view and viewing point" possess a far greater practical significance than mere platitudes or "lip service". However, for "Conscious Choice" to possess validity and purport, we must expand our choices, our points of view, enlarge our viewing point.

To this end, to stimulate and investigate new and congruent paradigms across multiple disciplines toward a greater and more pragmatic viewing point, leading toward abundant, evolving, sustainable and healthier Living, Lifestyles Unlimited newsmagazine was created. Our second issue begins to zero in on some of the existing and alternative points of view that are ignored or suppressed, and prevented from entering the mainstream. Quite possibly, the essence of the leading articles deal with an issue which statistics for the behavioral sciences have learned to approach with caution. Namely, "we may not conclude that increased ice cream consumption promotes increased drownings in the summertime". Aside from non causal correlation, the differences between statistical and individual action are myriad. We envision, with the reader's help, that as we build a foundation of physical reality which incorporates the "radius of curvature", many of our self-imposed limits will be abolished.

Please bear in mind that this newsmagazine is an open forum for both the professional and nonprofessional. Lifestyles Unlimited welcomes your thoughts as well as challenges to our line of inquiry. As Anthony Robbins says, "we must walk our talk", so this newsmagazine's mission is to network a sufficient data base to validate research at appropriate universities.

Alternatives to Self Imposed Limits

Linear or multidimensional thinking?

To what degree do our thoughts, beliefs, and perceptions shape the world we live in? To what degree are our limits governed by our capacity to see and understand increasingly larger segments of reality? What cognitive processes influence the intuitive leaps, the "ah ha" experiences which accompany understanding and creativity? Are we aware of what or how we think? How do we form the attitudes that lie behind our decision making? Theories in behavioral science predicate the mindlessness and scripted processing of much of our implied "thoughtful" action. Buddhist inner science calls for mindfulness, awareness, meditation, control and discipline of thought and action. New Thought religions point to an exact scientific relationship between individual consciousness, Universal Consciousness, and physical reality.

The foregoing previews an imposing spectrum on the nature of consciousness. On a practical level, what may these different points of view be suggesting? Is there a simple guideline that can connect mindlessness to mindfulness? Could there exist a continuum of thought and awareness, paralleling single linear dimensions to the multidimensions of physical space (geometry, fractals, relativity, and quantum mechanics...)?

Theories in behavioral science predicate the mindlessness and scripted processing of much of our implied "thoughtful" action.

As we observe the differences in the thought processes and awareness of a child of three and a nuclear physicist (or primitive man to modern man), we readily note that there is an attribute of expansion involved, quite like the move from a point of view to a viewing point. A case in point: the thirteenth century belief of a flat earth has been replaced and refined over the centuries. The sound barrier was another frontier.... Yet the familiar phrase "you cannot see the trees because of the forest" and vice versa, continues to haunt us. What parameters of a multidimensional quality constitute the difference between the idea of "trees" and the idea of "forest"? A point of view and a viewing point? Do we think in 3-dimensional thought at all times? What is a fourth dimension and how may it relate to a larger viewing point? Does it implicate faster than light velocity, negative gravitation? Does it involve the religious paradox how the one becomes the many, or the origin of matter, the force behind the manifestation of every material nucleus? Is the light barrier a mathematical reality, or a misconstrued interpretation of mathematics derived from limited points of view? Can a limited point of view close the doors to an abundant, endless and healthy future?

Is the light barrier a mathematical reality, or a misconstrued interpretation of mathematics derived from limited points of view?

Taboos are primitive. However, the dialogue between science and religion, required for multidimensional thinking to take place, to break out of our own self-imposed physical limits, seems to be a modern day taboo.

Somewhere between science and religion, the point of view and the viewing point, the East and the West, the child and the adult, lie answers to our conflicting and limiting theories, beliefs, and perceptions of the world and universe around us. And somewhere between the New Testament and the Old, the story is told metaphysically, about the point of view and the viewing point, cause and effect, chaos and pattern, the timeless beginning and the end, the

one and the many, and multi-dimensionally, how the one is the many.

This similar story may be deciphered from almost every religion and myth around the globe. The myth of creation buried in the sands of time that crossed distances and cultures. Are these coincidental dreams and imagination, or is there a connection, a scientific relationship window, to a greater reality? Can a bigger picture provide an improved road map, a compass, for both individual effort and the creation of a healthy, sustainable, survival pattern or order, out of chaos? Can informed *choice* and *viewing point* be Humanity's attractor's in chaos? Are there any bridges that may be conceived to escape the isolated drudgery, limitations, and singularity that linear (or at best 3-D) thought alone achieves?

The myth of creation buried in the sands of time that crossed distances and cultures.

Contemporary psychology embraces the view that our window to reality that forms and guides our behavior and actions, is comprised of our thoughts, beliefs, desires, aims, and experiences that each of us cruise through. A major portion of our perception of reality is, to the extent that we are informed and exposed, derived from our sciences to our religious institutions, from philosophy and ethics to medicine and healing, from power and politics to our ideas of freedom, democracy and economics. Yet, as we look at the state of the world today, it becomes apparent there is little consensus, enormous disparity and colossal constraints. Macro theories outside of their own disciplines in the hard sciences have not yet come of age. Beyond the hard sciences there exists only varied opinion and points of experience (individual and group). The nature of Man (neutral gender), his/her purpose or evolutionary trend, even emerging global survival demands, rarely manifest beyond the institutionalized and rudimentary sustenance needs motivated by pleasure and profit, an end in itself.

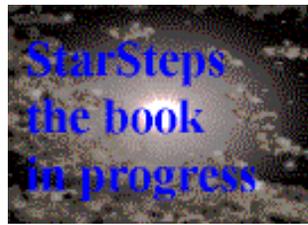

Today, evidence abounds of emerging viewing points, paradigm changes within multiple disciplines, around the globe. Their direct effect on world behavior standards is clearly being seen. However a modern Myth, the design across disciplines necessary to sustain global survival, still eludes us, remaining isolated and segmented. What is the nature of this pattern that runs across disciplines, submerged in fractals, awaiting the appropriate attractors which link chaos to order?

Let us browse through a few of the possible parameters or attractors in perception that may be implicated. We will use the flat earth example. A linear view from a single point, located near the surface of a level plain or desert, provides us, for all practical purposes, with the perception of a relatively flat terrain. Today, we can easily surmise the factors involved which created Humanity's historical perception of a flat earth and the process by which that perception moved to a round world. Obviously, at an elementary level, as the number, direction, position, speed, and comprehension of various points of view are extended and experienced, our window to reality becomes clearer.

What is the nature of this pattern that runs across disciplines, submerged in fractals, awaiting the appropriate attractors which link chaos to order?

Statistical numbers, expanded dimensions, velocity rates, and usable energy capacity appear to play a major role in our understanding of reality and its space-time relationships. Communication, mobility, becomes the cohesive network that shortens space-time relations by substitution of accelerated vocal, visual and physical transmission (or transportation).

Self-evident, it is a smaller world today because physical size has been substituted by speed. The obstacles of great distances and vast time appear to diminish before our very eyes. More precisely, space-time and position are increasingly being substituted by greater energy differentials of velocity and acceleration. The multidimensional question surfaces, can this same effect be created by factors other than velocity? What role may varying degrees of frequencies and fields play in transmuting space, time? In providing access to available energy capacities through gravitational mass differentials?

StarSteps link below ... "Expanding the Window..."

It will be noted at this point that the thought process is no longer linear. It has achieved a multidimensional status. More importantly, nothing was lost through this insight, this mode of thinking. Vast distances and eons of time may still be conceived, as well as the means by which to traverse and subdue their effect. Both multi-level views remain. Nor is individuality or identity lost as the 'One' begins to sense its' simultaneous unity with the 'many' through a larger grasp of gravity, space, time and energy relationships to consciousness.

Here lie the hazards of linear or limited level thinking alone. Conflict, duality and separation reign absolute and depend solely upon single points of view, real only under special conditions. The case of the concave/convex curve becomes identified by one's position, by which side of the curve the viewing is taking place. This interplay of duality, the ability to see, multidimensionally, the simultaneous unity of the local and the global, the one and the many, is incomprehensible in single and limited dimensions. Science and religion, physics and metaphysics are not seen to reside at opposite ends of the same continuum. The question that each may contain irreplaceable components of the fundamental laws of existence, a radius of curvature of reality, of how the one becomes the many, or how time and distance may be interchanged through gravitational mass differentials, has not even been raised in mainstream thought.

The preceding multidimensional patterns may be further grasped through Einsteinian relativity. The relative position and energy level of one reference point may now be seen to assume critical significance with respect to its relationship to any other reference point. This positional potential can reach and represent an astronomical and possible negative differential between a reference point in the micro world (nuclear) with a reference point in the macro world (between galaxies). That this differential is explicitly tied to the formula $E=MC^2$ and exclusively bond to the sine-wave characteristics, a radius of curvature of natural law, remains to be demonstrated.

This positional potential can reach and represent an astronomical and possible negative differential between a reference point in the micro world (nuclear) with a reference point in the "here and now", and in the macro world (between galaxies).

It is time we looked into and deciphered the age-old symbol, the Tai'Chi symbol of the circle with the sine wave passing through its center. Through the use of the discoveries of modern science, the scientific method, and multidimensional thinking, we may reveal and begin to apply the resulting concept of the radius of curvature of natural law for the benefit and survival of complex civilizations.

The East has now met the West. The time is ripe for putting all the pieces of the puzzle together for a wider view, even those that previously did not conform to our comfortable, isolated niches. But let us begin with the Western World's concept "look deep into nature and discover the self" rather than the Eastern view "look deep into the self, and discover nature". Something tangible we of Western background can grapple with, as we unfold the viewing point, bringing Eastern and Western thought together, and expand our window to Reality.

Evolutionary or Stagnant -part one

THE POSSIBLE HUMAN:

Wow! Man! What a question. Too deep. Don't ask. Irrelevant.

We are not even certain whether the human species evolved or was created. Ask the opinion polls. Aside from region variability, the average answer would probably lie at 50% for, and 50% against, either position. So how can we begin to question whether humanity has "arrived" at the epitome of all there is, or are we still evolving? Besides, its "Partyeeeeeee" time, or so the commercials and the college dormitories scream.

Well, we will bypass the role statistics, majority, and opinion polls play on today's mainstream lifestyle, as they shape and constrict its future.

However, this newsmagazine cannot and will not evade this imposing question. Specifically because, ultimately the answer will become the crux to our understanding, multidimensionally, of the space/time equivalency of mass energy of matter and the interacting part consciousness performs in our perception of reality.

Created or evolved aside, common sense and science both dictate that the human species is considerably remote from being all that it can be. So where and what, pray tell, are we evolving to? Does no one dare question this reality? Are there no answers because the reports and evidence are too conflicting and confusing? Is the question irrelevant to bringing about a sustainable and abundant future for humanity?

Does no one dare question this reality?

From a religious consideration, a desacralized society may be one in which religion is unacceptable or has become a rote ritual. Eliade (1957) in *The Sacred and Profane* refers to a desacralized society as devoid of meaning, purpose, possessing nothing to guide humanities attitudes and actions. Where events, work, economics are justified only by pleasure and profit, where cyclic time becomes terrifying and the view of existence a pessimistic struggle and a desperate clinging, grasping, searching for the ultimate trivia in the search for identity.

Out of this fog of darkness devoid of meaning, both religious and psychological views assert that human suffering arises. Poverty, lack, destruction, misery worldwide, past and present stem from the minds of human beings, the unhealthy emotions and low self-esteem of individuals, the fear, the hate, the jealousy, and the greed of individuals that fail to see a worthwhile aim. Yet, how do you relate the multitude of religious views and dogmas to modern day science and technology, to economics, to power and politics, and to what we teach our children?

a desacralized society...Where events, work, economics are justified only by pleasure and profit, where cyclic time becomes terrifying and the view of existence a pessimistic struggle and a desperate clinging, grasping, searching for the ultimate trivia in the search for identity.

A painfully oversimplified spectacle of human evolution results in the conclusion that once we discipline and control our base and beastly nature, we receive our wings and live happily ever after and forever, in some sort of utopia, playing the harp, bored stiff. No wonder we are scrambling with frenzy to reach this fabulous goal. A more in-depth study would reveal that both science and religion lie on the same continuum of reality, with religion in general, presenting a much wider viewing point of reality, than the sciences, each with their isolated point of view. So why the lack of connection? Did someone throw the baby out with the bathwater? Or has religious dogma and rote ritual, in attempting to preserve the past, become petrified, preserved as in preserves, relevant in language symbolism solely to the time and culture of its origin? If not so, why the continued separation of science and religion? What is the nature of the human species, its purpose, and where is it going? What have we done with the vast storehouse of knowledge, wisdom and understanding about human nature residing in religious disciplines worldwide?

Is there a developmental spectrum to human nature and consciousness? Are there stages to the development of the "self", "spirit", or "soul"? Much of Western psychology's definition of maturity and health reach no further than psychosocial identity, object constancy, mutuality in object relations, and more adaptive, less conflicted rearrangements of impulse and defense as Dr. Jack Engler (1984) points out. In contrast, Buddhist psychology shows there is nothing enduring and abiding, nothing we can call "real" self or soul or spirit or any fixed entity. You are catapulted into a world of constant and total change, moment by moment, with nothing enduring in either the inner or outer universe for more than a few milliseconds, as the physicists and psychophysicists have confirmed (Engler 1984).

Now where does that leave the "self" or "no-self"? If a developmental spectrum of human nature exists, then the long term benefits and end goals of the Possible Human either lack clarity, or are inconspicuous by their absence in our educational institutions. The metaphysical supposition of a metamorphosis of human nature, where the individual begins to sense his early state of existence as comparable to a frog floating in a barrel, unaware of the beautiful lake and world of senses (beyond our five senses) on the outside of his barrel, remains a fantasy. The common retort supporting this pretension concludes that such personality growth and awareness must be individually experienced to be realized as part of the continuum of reality, otherwise it is inaccessible. And the access gates are solely through the innumerable systems passed down through the centuries, of years of stupendous study, discipline, meditation, physical deprivation, sense deprivation, pain, or the vague love and good works series.

If a developmental spectrum of human nature exists, then the long term benefits and end goals of the Possible Human either lack clarity, or are inconspicuous by their absence in our educational institutions.

However obscure and incompatible these explanations may be to our western lifestyle, they become even more unpalatable through the ill-defined and prehistoric descriptions of the paths to attainment or salvation. Without contemporary definitions in modern day scientific language, a possible developmental spectrum of human nature remains in the realm of philosophical wonder, religious contemplation and the varieties of personal, opinionated beliefs. Quite meaningless to the causal forces that shape our future, a social structure of extreme physical sense gratification, a society that promotes an enduring struggle for survival, for pleasure and sustenance needs, as an end in itself. This latter state of survival needs and hygiene factors is commendably defined and outlined by psychologists Maslow and Hertzberg (1981). Though both theories attempt to lead to higher levels of personality development, of meta-needs, peak experiences, self-actualization, intrinsic motivational factors, the benefits still are vague, and subject to criticism.

Are there any other integrating factors that may possibly lead to a self-motivating, rewarding potential of human evolutionary growth, or even assure us

with a certain amount of certainty, that such developmental capability even exists. The bridge, the tie that binds, again seems to lead to space, time, energy, gravitational mass relationships to consciousness (or spirit, if you will). Some sources (1965) point to a mutual reference point of similarity approximately 2000 years apart. In 1901, Max Planck's Law of Radiation states that the level of energy upon which an nuclear particle or atom exists at any given moment is directly proportionate to its frequency of oscillation, and that the energy level of any body of matter is, therefore proportionate to the mean frequency of its particles. For at least two thousand years the metaphysician has stated that the level of energy, spirit, or potential upon which any particle, any body of matter, or any "Being" exists at any given moment, is directly proportionate to its rate of vibration. The obvious begins to glare out at you – as the electron can change energy levels and states, the possibility exists that large bodies of matter or "beings" can be induced to raise their energy levels and states. Though acting as observers of nuclear phenomena, human beings can not be excluded from the "real" world of physics and still be considered real. Where might this line of thought lead us?

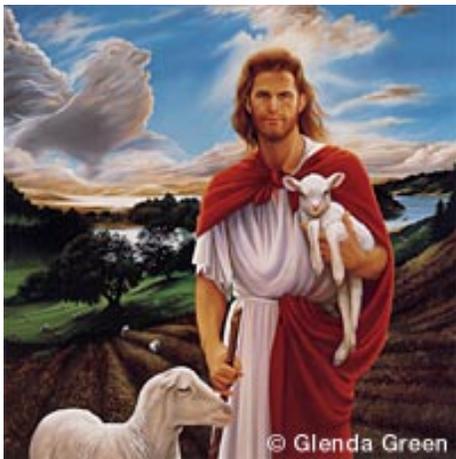

Let us bring forth just a few of the vast array of uncomfortable taboos. Business executives taking seminars on "firewalking", walking barefoot over coals; scientific studies and observations in altered states, alpha states, psi abilities, paranormal abilities, meditative states and their claims; superhuman feats in moments of extreme emergency; the mind-body affinity of the placebo effect, instant health variations of multiple personalities, spontaneous remission, psychoneuroimmunology, and spiritual healing; a nuclear particle's sensitivity to its polar charge altered, simultaneously, at a distance; finally the "miracles" of Jesus of Nazareth.

Denial and repression are Freudian defense mechanisms related to fear. Today we can no longer deny the enormous data of evidence we have developed and discovered

Denial and repression are Freudian defense mechanisms related to fear. Today we can no longer deny the enormous data of evidence we have developed and discovered. We just have to expand our "real" and merge it with common sense and reason to our scientific disciplines. We simply must ask what do higher energy levels, frequencies, and gravitational mass have to do with levels of consciousness, feeling, matter and space/time? The answers, fortunately or unfortunately, depending upon your point of view, have stared us in the face for several thousands of years at the minimum – in the repository of our religious and metaphysical disciplines, in language appropriate interpretation. **To be continued...**

Evolutionary or Stagnant -part 2

A fast trip down fantasy lane

(continued from vol 1 #1 - see reprint in "Evolutionary or Stagnant" section)

".....extraordinary experiences - intense, overwhelming, indescribable - are recorded at every time in history, and in every place on the globe and are widespread in American society today. No one with any familiarity with history or anthropology or psychology can deny they occur. They are a form of "altered states of consciousness" - to use the current approved phrase - something like intoxication or delirium or a hypnotic trance but different in their intensity, their joyfulness and their 'lifting out' dimension. In some cases, such experiences were triggered by drugs, in others by ritual dances, in others by disciplined meditation; but most such 'ecstatic interludes' about which we have accounts seem to be purely spontaneous - a man casually walking by a tennis court is suddenly caught up in a wave of peace and joy 'as time stands still'. Andrew Greeley, *New York Times*

In the previous issue we reviewed an elementary, yet broad spectrum of confusion circumscribing the question of the possible human - evolutionary or stagnant. We looked at some religious and psychological issues, at a possible scientific connection, and some uncomfortable taboos. We argued that a conceivable developmental spectrum of human nature would remain in the realm of philosophical wonder, religious contemplation, and the varieties of personal, opinionated beliefs without the support and authority of contemporary scientific views. We suggested this support would require currently isolated, scientific courses of study (points of view), to re-evaluate existing evidence across disciplines and time, and form congruent macro theories.

We also suggested that our centuries old, religious and metaphysical disciplines (appropriately interpreted), may provide us with a larger viewing point to further investigate our true nature and expanding relationship to Reality, without trying to "re-invent the wheel". A quick review will readily disclose a profuse number of highly acclaimed discoveries from our modern era, in many an old metaphysical textbook - with a different label on it, or called by a different name.

With the multidimensions of 'scale' described by fractals - chaos to order, point of view to viewing point, comes the capacity to confirm that faith and reason are not opposed, that science or knowledge is not disembodied from will and emotion, from values and life; that knowledge does not disengage from wisdom and understanding as it proceeds from our own nature to universal nature.

the imposed limits are painting a fanatically bland, stale, and shallow spectrum of human potential and human evolution

So too, the New Physics imparts elementary clues to the "statistical" nature of consciousness and reality very akin to 'general' metaphysical doctrine (underscore general, as opposed to specific, while Western psychological traditions (particularly Humanistic and Transpersonal Psychology) and Buddhist Inner Science, taken together, key in on a developmental perspective of human nature - from early stages in the development of the Self, to later, more advanced stages, respectively).

In addition, this newsmagazine is proposing that the limits imposed by the isolated and incompatible theories of relativity and quantum mechanics is painting a fanatically bland, stale, and shallow spectrum of human potential and human evolution, which extends to and constricts recognition of our relationship to the Universal - the Spiritual Dimension.

Deekak Chopra, M.D. (1989), writes in *Quantum Healing*, "There is no more beautiful experience than when the world expands beyond its accustomed limits. These are moments when reality takes on splendor."

Before we delve deeper into the mathematical incompatibility of the statistical nature of Quantum Mechanics verses the Theory of Relativity with their respective, isolated limits blockading an awe-inspiring vision of the possible human, let us examine a simplified, yet broad revision of a metaphysical and religious doctrine.

Other articles and future issues will then begin in earnest to scrutinize and question the limits set by the uncertainty principle in quantum theory which inadvertently generalizes both the statistical and individual nature of consciousness and reality into one and the same act; we will examine the limits set by the theory of relativity, why it breaks down at a theorized Big Bang or singularity, why we assume as fact that gravity is always attractive, and why we assume that the velocity of light limit is transferable to the velocity of a specified type of mass. These confusing limits, or misinterpretation of evidence, are creating immeasurable restraints upon the nature and causality of thought and the reality we experience. We will touch upon the Bose-Einstein condensation, Frohlich systems, Subquantum Kinetics, Fractals, and the radius of curvature of natural law. The outcome, we expect, will be a far simpler, more common sense view of human nature, reality, as well as a far greater degree of freedom toward a sustainable and bountiful future.

Let's call this journey a fast trip down fantasy lane, prior to the possibility (statistically speaking) that the fantasy may in the future do a quantum collapse into reality. The journey is a slightly summarized version of a forthcoming reprint.

It includes and coordinates many bits of knowledge and philosophy, which are known to almost every student of life, but seldom put together. We will throw into the mixing pot the philosophy of Aristotle of Thrace, the teachings and the demonstrations of Jesus of Nazareth, and the mathematical concepts of Dr. Albert Einstein. Hopefully, we will come up with, in its essence, a road map of the development of the human soul, showing the point at which that development begins, the direction and nature of its journey, its final goal, and a description of a number of way points which will be encountered.

We will define science as the orderly and intelligently directed search for truth that may be divided into three general groupings, the physical, mental/social, and spiritual sciences for simplicity sake. We will note that a sharp line cannot be drawn between them, because the divisions overlap, and because the fundamental laws that govern all three divisions are the same laws. To clarify this preposterous assumption, let us begin with Dr. Albert Einstein.

One of the best known but least understood concepts of Einstein is that which results in the formula $E=MC^2$. It points out that there is a simple relationship between pure matter and pure energy, that a given quantity of one may be converted into a precise quantity of the other, following a precisely

defined curve of conversion. We could illustrate the mass-energy concept by drawing a horizontal line across the bottom of our chart, calling this line "matter". Near the top of our chart we could draw another horizontal line which we could call "energy". Between these two parallel lines we would draw a curved line starting near the left hand end of the line designated matter, and curving upward and to the right until it meets the energy line at the right hand edge. This graphic relationship between matter and energy was by no means new or original when presented in 1905. Aristotle's first great work titled *The Physics* containing the four principals of alchemy i.e., earth-solid state, water-liquid state, air-gaseous state, fire-complete conversion of matter to energy, was conceived at least 400years B.C.E. and is virtually identical to Einstein's graphic relationship previously discussed. The text goes on to relate the effects upon matter, which are created by the application of energy, cause, potential of whatever form.

As Aristotle grew a little older and a little bit wiser, it occurred to him that a few things were left out and perhaps he had started from the wrong end of the curve. That instead of the having the basic principles starting with matter or material essence, they should rather be considered as the final manifestation of something that began at a much higher point. So he began his second discourse, *The Metaphysics* which began with energy, cause, spirit and God, as the cause of all changes which occur in the universe. That the words energy, cause, spirit are synonymous, that spirit is the active principle of change, and that without these principles, the universe could have no demonstrable existence or significance whatever, and are, therefore, obvious attributes of God.

The soul within the body, represents the application of spirit, the active principle of change or as the motivating force. It is the spirit which impels the material essence up the curve of development through stages of constantly increasing significance and manifestation.

Thus was born the two extreme views and separation of the same continuum, physics and metaphysics. To demonstrate that the path is the same regardless of the direction traveled, one of the many mutual reference points is quoted. In 1901, Max Planck's Law of radiation states that the level of energy upon which any nuclear particle or atom exists at any given moment is directly proportionate to its frequency of oscillation, and that the energy level of any body of matter is, therefore, proportionate to the mean frequency of its particles. For at least two thousand years the metaphysician has stated that the level of energy, spirit, or potential upon which any particle, any body of matter, *or any being exists*, at any given moment, is directly proportionate to its rate of vibration.

Let's throw in another curve. Having considered the significance of our basic chart from the standpoint of physics and metaphysics, how may this same matter, energy, spirit, curve, be used to illustrate the route followed in the development of the human soul? We will postulate that the body is pure matter without significance and without ability to manifest itself. The soul within the body, represents the application of spirit, the active principle of change or as the motivating force. It is the spirit which impels the material essence up the curve of development through stages of constantly increasing significance and manifestation.

The common psychological entrapments of individuals stuck at this level, even though the needs and desires of the body have long since been met.

We will define the starting point of the curve of development as the "I AM" point, or the point at which the material essence becomes conscious of its own existence. "I Am that I Am". Its first stage, the first goal of developing consciousness is the awareness and attainment of a multitude of physical needs and desires. We could call it the Gold level, the best recognized symbol of the needs and desires of the body and the only one visible during the first stage of development. We need not discuss the common psychological entrapments of individuals stuck at this level, even though the needs and desires of the body have long since been met.

The second level up the curve of development we will call the knowledge level. Easily identifiable as an accumulation of facts and information, each a potential tool, but unfortunately the mere possession of a large box of tools does not, of itself guarantee that the owner will be able to use those tools successfully in any worthwhile project. Above the level of knowledge, there is a level we could call Wisdom and above that there is another we will call

Understanding which is near the middle of our curve of development, the dividing line between physics and metaphysics. The dividing line is arbitrary, and has little significance except that below this level, matter or material essence is dominant, and all changes are relatively minor ones produced in matter by the application of varying degrees of energy and spirit. Above the level of understanding, it is energy and spirit that are dominant and matter becomes of relatively little significance. In fact, the nature and characteristics of matter may readily be altered above this level, by the simple application of the energy-spirit combination which was described by Aristotle as the principle of "Cause".

In fact, the nature and characteristics of matter may readily be altered above this level

We will, therefore, place another point upon the curve which we will call "control over matter". When this stage is fully reached, an individual would be able to bring about any desired change in the nature of matter. For example, he can, if he wishes, convert water into wine, or cause five thousand people to be fed with repletion from an original food supply of five loaves and two small fishes, and gather up twelve basket loads of residual food from the meal. These examples are used only because they were two of the practical demonstrations used by Jesus of Nazareth to illustrate the power and ability which is inherent in this level of development. In his discussion of this level, Jesus spoke of the power of "Faith".

..."Faith" not the sort of wistful hope or even hopeful confidence. The term actually referred to a state of complete and certain knowledge of the ultimate laws of cause and effect

The faith referred to by Jesus of Nazareth was not, however, the sort of wistful hope or even hopeful confidence that we usually think of. The term actually referred to a state of complete and certain knowledge of the ultimate laws of cause and effect, far beyond the elementary and isolated concepts of modern day science.

Beyond the level of control over matter, we find another area of achievement which we will describe as "Control over Spirit in Matter". This is the second of the three levels of development which were specifically explained and repeatedly demonstrated by Jesus of Nazareth during his earthly ministry. Here the advancing soul is approaching the threshold of spirit, energy, godhood, and now can begin to deal with spirit as well as matter - to heal the sick, the lame, the blind, or any infirmity. When Jesus performed his acts of healing, he made it plain that the power or ability to do such works came from a much higher level than that of the physical body which he occupied. "Of myself I can do nothing, but of the power which cometh down from my Father (the level of spirit) in heaven, do I do these things."

There is one final point in the curve of development, which we will call "control over Spirit". It is the highest of the various levels of attainment which were explained and demonstrated by Jesus. It represents the final mastery of the individual over his environment, and the ultimate manifestation of the creative spirit whose presence in the original body-soul combination impelled the individual upward, where the human ego must and does begin to blend with universal consciousness - "I go unto my Father", "I and the Father are one". Here we will point out that when a weakness or partial separation develops in the physical body and the spirit, an illness or disability is created. If the separation should become complete, the bond sometimes referred to as the silver cord will break and death of the physical body will take place.

Yet after Lazarus of Bethany had been dead for a period of four days, and after his body had reached a state of advanced decomposition, Jesus demonstrated that from the level of control over matter it was possible to restore the body of Lazarus to a condition suitable for occupation by spirit, and from the level of control over spirit he restored the spirit to the body and re-established the bond between them. As the final lesson of his earthly ministry Jesus repeated the demonstration this time using his own life and his own body. "I lay down my life that I may take it again. No Man taketh it from me but I lay it down of myself. I have the power to lay it down and I have the power to take it again. This commandment (control) I have received from my Father (the level of spirit) in heaven".

From this fantasy, we could surmise that the life and ministry of Jesus of Nazareth were designed to serve two tremendous purposes: first to point out and

to light the path which leads to spiritual fulfillment "I am the Way"; second, to relieve humanity of the tremendous burden of guilt which had accumulated as a result of the doctrine of retribution "an eye for an eye" and a tooth for a tooth", which had been followed for generations. This was accomplished through the principle of vicarious atonement, "I am the lamb that taketh away the sin of the world", "Jesus died for our sins". Note that the effectiveness of the sacrifice is dependent upon the belief of the individual. If any person will accept completely in his own mind and heart that the sacrifice was made voluntarily, that it was made for him and that it will remove his sin, then that person's conscience is immediately freed of its burden of guilt and he can proceed without hindrance, on the path to spiritual development.

Thus we see that, not only was Jesus of Nazareth the greatest master and leader who has ever come down the curve from the level of pure spirit to the consciousness of the undeveloped human; not only did he demonstrate the way, the truth, and the life, but he was also the greatest psychiatrist that ever lived, and the only one who, instead of charging a fee, offered his own life to assure the success of the treatment.

We have followed the path of the developing individual, from its point of beginning, when the body-soul combination first becomes aware of its own existence, and where the requirements of the body must be met before any other progress can be made. We have implicated the challenges to be met and understood as the individual moves up the curve of constantly increasing ability and manifestation until at last he reaches the level energy or light, (heaven), where the spirit becomes independent of matter, and the body has little or no significance.

In conclusion it may be desirable to restate, in the simplest possible manner, a few of the principle points which we have considered. First - the Path is one which every human being must, and will, follow, from one end to the other regardless of the length of time required, the number of approaches attempted, or the number of stopovers, detours, or obstacles which may delay the arrival of the traveler at his ultimate destination. When Jesus said, "whither I go thou canst not follow me now but thou shalt follow me afterward," he was not speaking only to Simon Peter, nor only to his disciples. He was speaking to and of all humanity, wherever it might be. "And other sheep I have, which are not of this fold; them also I must bring, and they shall hear my voice; and there shall be one fold, and one shepherd."

"All of the things which I do shall ye do also, and greater things than these shall ye do". The implication is that there are still greater abilities to be achieved than the raising of the dead

Second - everyone must, and will, achieve all of the powers and abilities inherent in the various levels of development, as these levels are reached. When Jesus illustrated, by the performance of "miracles", the abilities which are achieved at each level, he repeatedly pointed out to his disciples and to humanity at large that "All of the things which I do shall ye do also, and greater things than these shall ye do. Is it not written in your law, I said, ye are Gods?" The implication is that there are still greater abilities to be achieved than the raising of the dead, which was the highest level Jesus specifically demonstrated. The level of absolute creation, where new life and new universes are created may be one such level. Jesus appeared to be somewhat discouraged by the inability of even the more learned of the time to grasp the simple principles which he outlined and then demonstrated before their eyes.

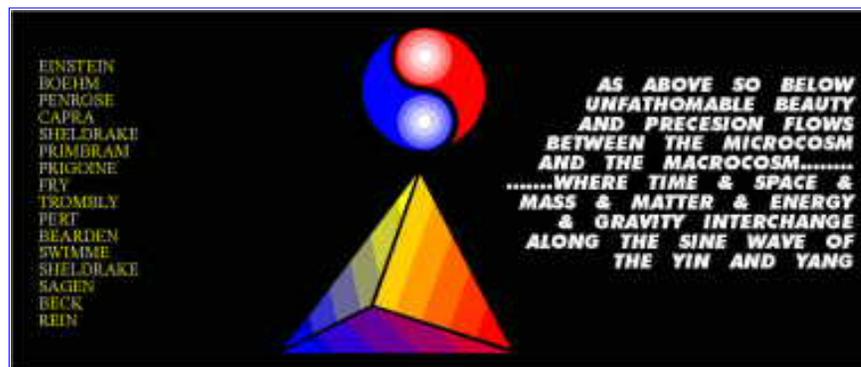

Third - the abilities which are achieved at each level of development are not discarded when a new level is reached, but are carried forward as in any course of study or training; at least as long as the abilities are required by the advancing individual. For example - the ability to obtain the necessities of the body, which ability is achieved at the gold level, must continue to be used at least until the level of control over matter is reached, whereupon gold becomes of little or no significance. So, also, knowledge and wisdom must be sought and pursued diligently until the advancing soul begins to blend with Universal spirit when all knowledge, wisdom and understanding become readily available to the individual from the Universal source. Then the individual will no longer see "as through a glass darkly, but will see face to face." "And the light shall come forth as a crown of Glory, and all knowledge and the wisdom of the Universe shall be his; and the Understanding thereof."

The exact nature of the area or the environment in which the traveler continues his spiritual growth beyond the level of control over matter has long been a subject of speculation and some controversy. There are some who describe the change in environment by saying that the developing individual moves to a "higher plane", others say that the move is to a "higher frequency" or "rate of vibration". Still others feel that the change is best described as a move to a

"higher dimension". There are also many persons who feel that because there are undoubtedly many other planets upon which life, intelligence and spiritual development has progressed considerably beyond the average level which has been achieved on earth; that perhaps the earth human may at some stage of his development take up his residence upon a more advanced planet where the environment may be more conducive of rapid progress. All of these speculations and partial definitions are the result of humanity's attempt to rationalize or to understand an area which is still somewhat beyond our understanding. Whatever the truth may be it is probably too complex to be explained in any words which are now in our vocabulary. We can, however, press onward with the complete assurance that the "Path, the Way and the Light" do exist; that we are all upon the path; that we will all find the way; and that the light and love that are beyond understanding will continue to grow in brilliance and in warmth with every step of our approach.

Expanding The Window to Reality....

[A Viewing Point of E=MC2](#)

follow the Radius of Curvature

This will be an ongoing column of thought provoking issues, questions and discussions that are unresolved in the context of today's limited, fragmented perspective.

The prime objective is to lead to the discovery of the nature of the radius of curvature of natural law and its implications toward a sustainable and

bountiful future.

Some of the concepts we will be looking at are presented below. You may review in more detail an introduction to the concepts by following the link in the above graphic picture. A book subtitled "Breakthrough", specifically dealing with the ease of surpassing the light barrier and undisabling gravity (giving gravity its other leg, i.e., positive pole and negative pole), is in the making.

AT RELATIVISTIC SCALES TIME AND MASS CHANGES ARE NOTED BUT MISINTERPRETED

While the quantity C (velocity of light) represents an energy differential, it is usually considered in terms of kinetic energy. Some may believe that it can be reached only when there is a rate of increase or decrease in the degree of spatial separation between the reference points, equal to 3×10^{10} centimeters per second, or in simpler terms, a velocity equal to that of light. It is necessary therefore to point out the fact that an energy differential does not necessarily manifest itself as a velocity. It can also exist as a frequency. Our present laws of physics state that the energy level upon which an electron, a photon, or other particle exists is proportionate to its frequency. The mathematical rule is E equals Fh , where E is the energy, F is the frequency and h is a factor called Planck's constant.

We can now see that a frequency differential which by the above formula is equal to 9×10^{20} ergs per gram also represents the quantity C . When such a frequency differential exists between the observer and the point which he is observing, we again find that the natural laws at the observed point reach zero value with respect to the observer. If the frequency differential exceeds this value, the action of the laws will become negative. A material object such as a spacecraft upon or near the surface of the earth would cease to exist as matter and would enter the plane of energy insofar as the observer on earth was concerned, but as we have previously pointed out, an observer upon or within the object, whose frequency or energy level had been raised to the same degree as that of the craft, would be unable to detect any change.

so is it going to be - MATHEMATICAL ERROR OR EYESIGHT LIMITATION - because the theory of relativity does not say that man cannot travel faster than the speed of light, it merely says that no one on earth will be able to see him do it.

[To StarSteps - book in progress](#)

That this discovery will stimulate and expedite a major transformation of our concepts of Space, Time, Mass/Matter, Energy, Gravity and States of Consciousness, is inevitable.

That this discovery will stimulate and expedite a major transformation of our concepts of Space, time, Mass/Matter, Energy, Gravity and States of Consciousness, is inevitable.

We will begin in the next issue "A Viewing Point of $E=MC^2$."

News and Views From A Viewing Point....

The Carpenter

(received by e-mail, original formating by [The Stelle Group](#))

An elderly carpenter was ready to retire. He told his employer-contractor of his plans to leave the house-building business and live a more leisurely life with his wife enjoying his extended family. He would miss the paycheck, but he needed to retire. They could get by.

The contractor was sorry to see his good worker go and asked if he could build just one more house as a personal favor. The carpenter said yes, but in time it was easy to see that his heart was not in his work. He resorted to shoddy workmanship and used inferior materials. It was an unfortunate way to end his career. When the carpenter finished his work and the builder came to inspect the house, the contractor handed the front-door key to the carpenter. "This is your house," he said, "my gift to you".

What a shock! What a shame! If he had only known he was building his own house, he would have done it all so differently. Now he had to live in the home he had built none too well.

So it is with us. We build our lives in a distracted way, reacting rather than acting, willing to put up less than the best. At important points we do not give the job our best effort. Then with a shock we look at the situation we have created and find that we are now living in the house we have built. If we had realized that, we would have done it differently.

Think of yourself as the carpenter. Think about your house. Each day you hammer a nail, place a board, or erect a wall, build wisely. It is the life you are building. Even if you live it for only one day more, that day deserves to be lived graciously and with dignity.

The plaque on the wall says, "Life is a do-it-yourself project." Who could say it more clearly? Your life today is the result of your attitudes and choices in the past. Your life tomorrow will be the result of your attitudes and the choices you make today.

A Journey

received by e-mail: perceptions@wave.co.nz

There is a journey awaiting you. It comes in truth and promise.....

when you reach the point of not knowing who you are or where to go.

This most precious but often painful passage is the journey into yourself.

You will travel to places never before visited, where you meet unspoken fears and unearth buried truths.

You will climb high and perilous mountains... those that rise up from inside yourself.

You will explore forgotten waters held deep in the sea of your soul.

You will be stranded in the wilderness and find a way through pathless land.

You will be lost before you are found. You will be empty before you are full.

You will cry the deep sobs of the earth and tears of rain will cleanse the house around your heart.

In time...because life, like birth and death, knows it's own time.....

your fears and struggles and unknowing will be transformed.

You will become a mountain place where eagles soar.

You will become a reflecting pool which sees and knows the mysteries of your life.

Your heart will be light like a butterfly as you follow the currents of its true desires.

The flight of the honeybee will be like yours as you seek the nectar of what brings sweetness to your daily life.

Most of all you will become who you truly are.

Your life will hold truth and promise and meaning,

And the heart of the heavens will hold your heart.

THE 4 E'S AND LIP SERVICE SPIRITUALITY = Extinction

(Perhaps, as we balance the tripod (mental, physical, spiritual), upon which civilization rests - strengthening the spiritual leg, we can.....)

Dissolve the barriers to sensitivity

By Iconoclast - ajw2699@gateway.net

One of the major components of our 'fundamental dilemmas' is that we are ardent supporters of the so-called capitalist ideal. Capitalism has scores of \$trillions of dollars invested in non-leading edge tools and technology; surely they are going to hold on to what they've invested in until they are at least satisfied with the dollar return on their investments. Unfortunately it is the very socioeconomic system we support (and reinforce), held together by legislation, propaganda, military force, and even our education system that is impeding the transformation to alternative leading edge tools and technology.

A question I ask each and everyone of you is: where does change occur when adhering to tradition and habit?

Another aspect of our socioeconomic system that is in need of serious examination is the monetary system. It no longer is important what the true original intent for developing money was; what is important is that we clearly see the true and primary function of a monetary system, which is, to serve as a mechanism to control human beings.

Where there is control where is freedom?

Should one seriously go and study the expenditure of human manifested energy (both psychological and mechanical) to keep doing what we've been conditioned to do as a society, one will clearly see that there is a gross wastage of energy. Energy wasted on a magnitude that surpasses the atrocities set in motion in the name of Christ, Hitler, and Milosevic combined!

The wastage of human energy to which I am referring began to accelerate at the onset of the industrial revolution and 'mushroomed' when Henry Ford set in motion his method of mass production. This wastage of energy was further augmented with the innovation of the computerize robot. -Were these developments in human history motivated by our desire to free humanity from the toils of labor or was it our desire to overflow the capitalists pockets with money and/or capital?

At the same time industrialization was in operation, we were passively forced to waste human energy. The primary reason stems from the popular belief held by those responsible for legislation and economic policy that in order to maintain a 'healthy' socioeconomic state, the state must be considered fully employed and money is the required transaction medium. With these conditions in full swing, you and I are born into this world not knowing how to survive in the current conditions and are almost fully dependent on actions expressed by our elders.

I'm not going to expend energy here by elucidating a brief history of human evolution and it's relation to 'economics', but it is important to point out that what I've just put before you (the reader) is surely functioning as a matter of fact. I do not deny that work is required in order to develop, transform, and be responsible for our own survival - it requires an enormous amount of work!

But it is doubtful that we as human beings operating in our current pattern have the energy to cultivate the proper work. There is such a powerful compulsion/imposition to expend energy in non-value added directions just to obtain money to meet our own survival needs, where will we get the energy for our own value added development?

Then we have our own conspicuous image we must maintain which further magnifies the quandary of energy waste! We can't expect the government(s) to seriously support a solution to the disorder that is currently functioning in our culture, in fact, our government(s) encourage such disorders. - given their current belief system, how else will they be able to collect tax revenue?

We have developed a mastery in transforming our environment and have all but totally neglected the development of transforming who we are as human beings. The problem really isn't in the work that we are doing; the problem is that we really do not fully understand what it is that we are working for.

SENDING HOPE!

Hilary Collins [*hilly@epix.net*](mailto:hilly@epix.net)

Peter, so true and your thoughts carry all of the weight of each of our disappointing realizations as members of our generation! But somehow, and this became evident to me in a flash last year, a flash that rebirthed my personal hope, it isn't too late for our generation to create a wave of intended change. This change will embrace our united concern for the 7 generations and is the one that will hold reverence for self and reverence for all other relationships as it's highest intention and at the center of focus.

We are not powerless and our voices, together with technology, are the generation's Phoenix Energy rising from the ashes of our self induced misery and evolving and growing into the energy of peaceful compassion.

True, we had such expectations for our lives to end up "happier, easier and more convenient", but here we are, stunned and disappointed, ...and here is where my hope came alive again,...we are all wiser. Survivors emerging as a generation, all digging out the pile of rubbish we have buried ourselves under.

Through re-birth, re-hab, re-whatever it takes to collect our lost pieces and shatter the impossible outcomes of our failed dreams, we are realizing that none of us individually had the key necessary to create the compassion involved in birthing, nurturing and supporting the concept of peace. For creating anything requires the mass consciousness to believe and intend in it's existence. Today we, in so many different circles, have finally discovered our connected creative energy. We are beginning to understand global support is the foundation and is the only available path to true peace and comfort.

There are so many hooks involved in this broken dream of the "picket fence reality". One of the most destructive is massive consuming to take care of individual needs. Hoarding and storing has become such a compulsive habit. One that the 5th Avenue Merchants and Madison Avenue Media successfully mated with the image of "Love" and fulfillment. Together we each contrived the jungle our intuitive and rebellious intentions got lost in. Just as together we supported the apathetic belief that we had no power to change systems. It is no wonder we were swayed off track, this is powerful creative work to sell products and maintain structure. It has cost us dearly.

The hope is, Who in their right heart would allow this massive destruction of our planet's surface?

Now is the time for action. We need to get our selves in our right heart. My mission has become one to get our children there in the first place. If we are willing to share with them what we have learned, they do not need to waste their time in back track mode. Today our children are repeating what we have modeled to them. We were terrible models. They are out of control with all of the mountains of plastic ugliness they need to have. We have limited understanding of connecting to where things come from, (source energy is of no consequence). Children kill each other to steal sneakers, manufactured by children held in deplorable conditions. People continue to put funds into research as absurd as, "Does television violence have a detrimental effect on our young boys?" These are the people that intend to help, but need to be encouraged to jump off the carousel to nowhere and onto the train that will carry us to a new reality. One of abundance for all when we simply take what we need and tend to creating beauty and comfort by harmonizing with nature and utilizing our scientific discoveries to clean up and re-engineer systems.

I am certain that technology can be used to create compassion, responsibility and understanding of systems and the connection between choice and consequence. Somehow, I am determined to be a part of it!

As you said ostracizing and sarcasm aimed at anyone intending to create any kind of change was the force that once stopped each individual hornblower from gathering enough followers. Now we have the web and I just am certain our generation is in the end stages of the Phoenix and ready to do their part in creating a world worthy of the 7th generation! There are so many of us who care and have the ability to stir up the energy necessary to create action. It is up to us to get the majority of those who feel the pain off Prozac, (they are the initial indicators of major discomfort, who were waking from the

apathetic energy, but too fearful to give up what they thought they needed, so they allowed themselves to be put back to sleep.)

There are a lot of them too, but who wouldn't want to get rid of that numbing drug anyway! Once there is a cause and a path toward open heart, I am certain we will create intended change.

Well, I really rambled on today. I love to write, that is my energy! I am actually plastering and painting today, so I need to get that action going now. I will continue to send people your way, as I send you all the energy of this dream!

Hilary

Pathfinding Purpose & Objectives

Lifestyles Unlimited is a reader's online newsmagazine offering an open forum for both the professional and the nonprofessional. Our intention is to provide a medium where the reader may enjoy the debates on the controversial issues/fundamental dilemmas of the day, and to contribute to the research and exploration of innovative concepts that will give us a choice in how we approach the Future.

Due to its coincidental similarity of purpose to Noetic Sciences Pathfinding Project, and hopefully, a greater awareness level today, of dilemmas threatening our survival, we are reactivating this newsletter online.

The purpose of this newsletter is:

- to stimulate the development of new paradigms across multiple disciplines.
- to unveil and integrate the anomalies of scientific reductionism and determinism that impede our perception of a larger, sustainable and healthy reality.

- to reach the 'ah ha' comprehension of the radius of curvature of natural law, identifying it's characteristics and application..... that apparently, even ancient civilizations were aware of.
- to act as a vehicle and network for data assimilation, until sufficient evidence warrants research, testing, experimentation and development.
- to acquire sponsors to fund research at appropriate universities and educational institutions.

We feel strongly that the dialog between the professional and layman must be broadened. Here is a platform that allows both the professional and nonprofessional to communicate some of the thoughts that concern the future of the physical, mental, and spiritual sciences with reference to sustainable life on this planet.

We welcome disciplined and innovative thought from all quarters. Those who wish to express themselves without the peer review of professional journals, are welcome to contribute. We expect the layman who contributes will know and understand his/her subject matter sufficiently to present it with clarity and credibility. Personal observations and experiences, that have/can be replicated/or confirmed by others are also welcome.

Those who recognize or experience tendencies described in The Ten Insights (tendencies, which, regardless of critics, may be found underlying all major religions), may also express their views. One area of interest, perhaps is unspoken communication occurring with greater degree of clarity and frequency, not only between individuals, but between individuals and a "group consciousness", a morphic resonance, perhaps.
